

| | Who is responsible for gathering and entering the dosing information for barium during a Video Swallow Study? | Who is responsible for weighing and entering the weights in the EMR at your facility as a part of the Video Swallow study? |
|-------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------|
| ORG A | Our imaging assistants that take part in our swallow studies (or radiology tech if we are short staffed) gather and enter dosing info | Patients do not get weighed when coming for just a swallow study appointment |
| ORG B | Radiology | Radiology |
| ORG C | Radiology Tech | Radiology Tech |
| ORG D | Radiology Tech | We do not weigh the patient for this procedure. Not indicated per radiology and ASHA. |
| ORG E | Radiology Techs (They do however rely on the SLP to tell them quantity of barium that is used during the study.) | Radiology Tech |
| ORG F | We just migrated to EPIC and our radiology department has been ironing out this very process. At this time, they are not reporting the volume of barium used, nor are they recording the child's weight. We do note in our swallow eval documentation that barium was utilized in the swallow study, but our therapists are not documenting volume used or weight either. | |
| ORG G | Speech tracks the dosing on paper; Radiologist comments on dosing on signed report. | IP- Nurses or CNAs obtain weights, Clinics- Nurses, OP - If patient is coming only for a MBS Study, we don't obtain weights. |
| ORG F | Imaging Technologist | Imaging Technologist |
