| Does your (outpatient) rehab team support lactation (breastfeeding infant)? Counselors or consultants? | We could definitely benefit from this support, as we have many infants that are breast fed – currently no counselors/consultants but would love to have access to one | We currently serve inpatients and some outpatient populations on an as needed basis. We have IBCLC (lactation consultants ) who perform this role. NOT Rehab       | Yes  | Counselors   |
| What disciplines are involved?   | Primarily ST  | They are by degree RNs and RDs, but currently no other discipline such as OT or PT.  | SLP and IBCLC partner to see these patients if the family requires breastfeeding support. ENT is also looped in if there are TOT concerns or other ENT related concerns. | Primarily Occupational Therapy, but we also have a Speech Therapist CLC  |
| What CPT codes are they typically using?   | Billing feeding sessions under the 92526 code   | We do not charge, so I can't speak to the CPT codes, but I am interested in what you learn from others as I am working to build our outpatient and to also charge. | 92610. The IBCLC does not bill for their portion of the session.   | OT Evaluation codes & Therapeutic activity- 97530  |
| What other considerations are there in providing   | Would they be available a few days a month to drop into feeding sessions (like  |  | We do have some SLPs who work at a site that is 1.5 hours away from the sites  | Ankyloglossia support and referrals; oral motor therapy; supplemental feeding support training; bottle feeding training and adaptations; support and preparation for the |
